

aKua Alkaline Ionized Water

What is alkaline ionized water?

In simple terms, when tap water undergoes electrolysis, water molecules split to produce hydrogen ions (H^+) at the cathode causing water to be more acidic, and hydroxide ions (OH^-) at the anode causing water to be more alkaline. The water produced contains antioxidants, similar in fruits and vegetables, which help fight against various health problems such as diabetes to enhance wellbeing. Not only that, the acidic portion of water can be used for skin care and sanitizing purposes. aKua alkaline ionizer is a device that gives you multiple benefits to suit your daily needs!

Overview of electrolysis process:

What are the benefits of drinking alkaline ionized water?

It satisfies our **NEEDS!**

Nutralizes acidic wastes in our body

Majority of the food we eat daily are acidic, also the byproducts of metabolism are acidic. Drinking alkaline ionized water helps to neutralize acidic wastes accumulated in our body over time and promote a balanced pH for healthier living.

Efficient source of antioxidants

Alkaline ionized water contains plenty hydrogen ions which are a natural source of antioxidants.

Antioxidants help neutralize free radicals that are harmful to our bodies when in excess and boost our immune system.

Enhances hydration

Ionized water has smaller water molecule clusters that are absorbed 2x faster at the cellular level, hydrating our body faster. It gives us increased mental clarity and keeps us energetic for the day. Due to its small water cluster size, ionized water also tastes smoother and does not cause you to bloat easily!

Detoxify our bodies

Drinking alkaline ionized water is a safe and natural way to detoxify. Toxins and wastes are removed from our bodies faster by smaller water molecule clusters, allowing our bodies to absorb nutrients better.

Supports our health

AKua is a certified medical device under the KFDA. Research studies on alkaline ionized water have shown to improve health problems like diabetes, gout, arthritis, constipation and eczema.

For better lifestyle needs

Use aKua for multiple purposes!

- Alkaline Water 4** ♦ For cooking, baking, boiling soup:
- Brings out the rich flavor and aroma of the food
 - Removes stench of fish, beef and chicken meat and makes it more tender
- ♦ For washing fruits and vegetables:
- Removes pesticides and wax
 - Keeps fruits and vegetables fresher for a longer time

- Alkaline Water 3** ♦ For making ice
- ♦ For brewing coffee and tea:
- Enhances aroma of coffee and tea
 - Reduces acidity level in coffee
 - Aids in hangover relief from excessive alcohol consumption

- Alkaline Water 2** ♦ For general/regular drinking:
- Effectively hydrates your body after an intensive workout
 - Keeps you energize
 - Natural detoxification ideal for weight management

- Alkaline Water 1** ♦ For beginners to drink in the first 2 weeks
- ♦ For making milk formula

- Purified Water** ♦ For taking with medication

- Acidic Water 1** ♦ For skin and hair care:
- Acts as a good facial cleanser, facial mist and lightens dark spots
 - Promotes glossy and healthier hair
 - Relieves itchiness and eczema

- Acidic Water 2** ♦ For sanitizing:
- Use to sanitize cooking kits, chopping board, utensils and table tops
- ♦ For treating minor wounds and cuts

An inside view of our filter:

1. High-density felt film
 - ◆ Rust and floating sediments are filtered through this high purity filter
2. Granular activated carbon
 - ◆ Chlorine, bacteria and chemical substances, agrichemicals and odour are removed through the first porous carbon filter.
3. Silver-nano activated carbon block
 - ◆ Residual chemical substances, agrichemicals, chlorine and odour are eliminated via adsorption while improving water taste. Bacteria growth inside the filter is inhibited by the silver impregnated carbon.
4. Sediment filter
 - ◆ Further filtration of floating sediments
5. High-density Felt film
 - ◆ Further filtration of impurities
6. Antibacterial ball media
 - ◆ Prevents bacteria propagation. Efficacy of over 99%
7. Negative Ion ceramic ball
 - ◆ Retain negative ions in water to maintain the alkaline state of feed water and remain fresh
8. Far Infrared ball media
 - ◆ Activates water molecules and makes it small through weak far infrared rays
9. Dechlorine ball media
 - ◆ Ensures chlorine is eliminated
10. High-density Felt film
 - ◆ Final filtration of foreign residuals.

Specifications

COMPONENTS
Certified against
